

Introducing the ProcessMaker iBPMs Platform

The Next Evolution in Business Process Management

Today organizations face a common obstacle to digital transformation. A mix of disparate legacy and point software systems and manual paper-based tasks lead to bottlenecks and costly inefficiencies across organizations. To overcome these challenges, organizations look to scalable workflow software to automate processes and connect their existing systems to their workflows with ease.

Using the ProcessMaker intelligent business process management (iBPMs) software platform, business users can rapidly design and deploy solutions to complex workflow problems in weeks, not months, with a low-code approach. By integrating and extending your existing systems on our platform, you drastically improve organizational efficiency. ProcessMaker works seamlessly to automate processes, reduce bottlenecks, and deliver true digital agility to your organization.

ProcessMaker's low-code platform ensures that organizations see a rapid ROI even for their most complex workflow projects. Empower business users to solve line of business (LOB) automation challenges with a drag-and-drop workflow designer to create and deploy business processes without IT.

Connect and modernize existing systems Integrate modern apps together with legacy systems to remove information silos in organizations using ProcessMaker. Modernize legacy systems, increase productivity and extend ROI on existing investments so you can deploy solutions faster and at a lower cost.

ProcessMaker allows different business teams to collaborate to build processes by sharing common building blocks such as forms, screens, scripts, and connectors to third party apps with custom functionality. All elements of a process are version controlled to ensure strong life cycle management and good IT governance practices are met.

Automate workflows across your organization with the latest release of our next generation platform.

Some of the features of our low-code iBPMs platform include:

- **BPMN 2.0 Compliant Process Modeler:** Design and automate any workflow in any industry using process elements that can be easily configured to escalate requests, follow complex business rules, and integrate external software to turn your business into a well-oiled machine.
- Screen Builder: Business users can design digital forms using our intuitive controls to create any form in a matter of minutes, leaving the coding to the experts. Developers can add layers of code to forms to incorporate complex calculations, data validations and unique design, putting manual data entry and human error where they belong in the past.
- Trackable Requests: ProcessMaker 4 makes tracking your requests as simple as looking at your inbox. Find out at a glance who is currently working on a request, the status of your request and wherein the workflow your request is located. Stay on top of your requests in real-time.

Request a free demonstration of ProcessMaker and discover for yourself how this process automation software platform empowers you to innovate, adapt and respond.

- Point-and-click SLA Management: Managers and C-Suite can create customized reports to
 automatically track any piece of request data and send automated notifications about changes
 at set time intervals. This makes it easier to maintain SLAs, track the progress of any department
 and stay on top of urgent tasks to manage both workflows and people more efficiently.
- **Script Builder**: Developers can code and debug programs that connect to third party systems or add other custom functionality using popular programming languages deployed in containers within ProcessMaker without affecting any processes or the rest of the platform.
- Web Entry / Actions by Email: Allows end users to make decisions and add comments and feedback without logging into the ProcessMaker platform.

About ProcessMaker

ProcessMaker is low-code iBPMs and workflow software. ProcessMaker makes it easy for business analysts to collaborate with IT to automate complex business processes connecting people and existing company systems. Headquartered in Durham, North Carolina in the United States, ProcessMaker has a partner network spread across 35 countries on five continents. Hundreds of commercial customers, including many Fortune 100 companies, rely on ProcessMaker to digitally transform their core business processes enabling faster decision making, improved compliance, and better performance.

Improving Efficiency for 250+ Clients Worldwide

ProcessMaker is a Winner

Did we mention we're an industry leader?

Top industry analyst firms consistently rank ProcessMaker as a leader in enterprise workflow and business process management (iBPMs). See our latest reviews and rankings from Gartner Peer Insights, G2 Crowd, and Capterra.
